## Java Script

## Handling Events and Exceptions

Event	Description	Example
ondblclick	Event occurs when user double-clicks an object.	<code>&lt;button ondblclick="show()"&gt;Show Text&lt;/button&gt;</code> where, show() is the function to be executed when the event occurs.
onerror	Event occurs when an error occurs while loading a document or image.	<code>&lt;img src="image1.jpg" onerror="alert('Cannot load image.')"&gt;</code>
onfocus	Event occurs when an element gets focus.	<code>&lt;input type="text" id="firstname" onfocus="alert('hello');" /&gt;</code>
onkeydown	Event occurs when any key of the keyboard is pressed.	<code>&lt;input type="text" onkeydown="alert('key is down')" /&gt;</code>

## Handling Events and Exceptions

Event	Description	Example
onmouseout	Event occurs when the mouse is moved off an element.	<code>&lt;p onmouseout="alert('Mouse moved out of the paragraph')"&gt; Move the mouse pointer out of my paragraph to display an alert box.&lt;/p&gt;</code>
onmouseover	Event occurs when the mouse is moved over an element.	<code>&lt;p onmouseover="alert('Mouse moved over the paragraph')"&gt; Move the mouse pointer over me to display an alert box.&lt;/p&gt;</code>
onmouseup	Event occurs when the mouse button is released.	<code>&lt;img src="image11.gif" onmouseup="alert('You clicked image11')"/&gt;</code>
onselect	Event occurs when a text is selected.	Select text: <code>&lt;input type="text" value="Select me!" onselect="alert('You have selected the text.')" /&gt;</code>
onunload	Event occurs when the user exits the page	<code>&lt;body onunload="alert('The page is unloaded')"&gt;</code>
